## Definition:

**Animation** is the special visual or sound effect added to text or an object. e.g. You can have your text bullet points fly in from the left, one word at a time, or hear the sound of applause when a picture is uncovered.

Animations can be added to text, pictures, shapes, tables, SmartArt graphics, and other objects in your Microsoft PowerPoint 2007 presentations to give them visual effects, including entrances, exits, changes in size or color, and even movement.

**Note** Transitions are another way that you can add visual effects to your slides. For information about how to add transitions between slides,

# Types of Animation:

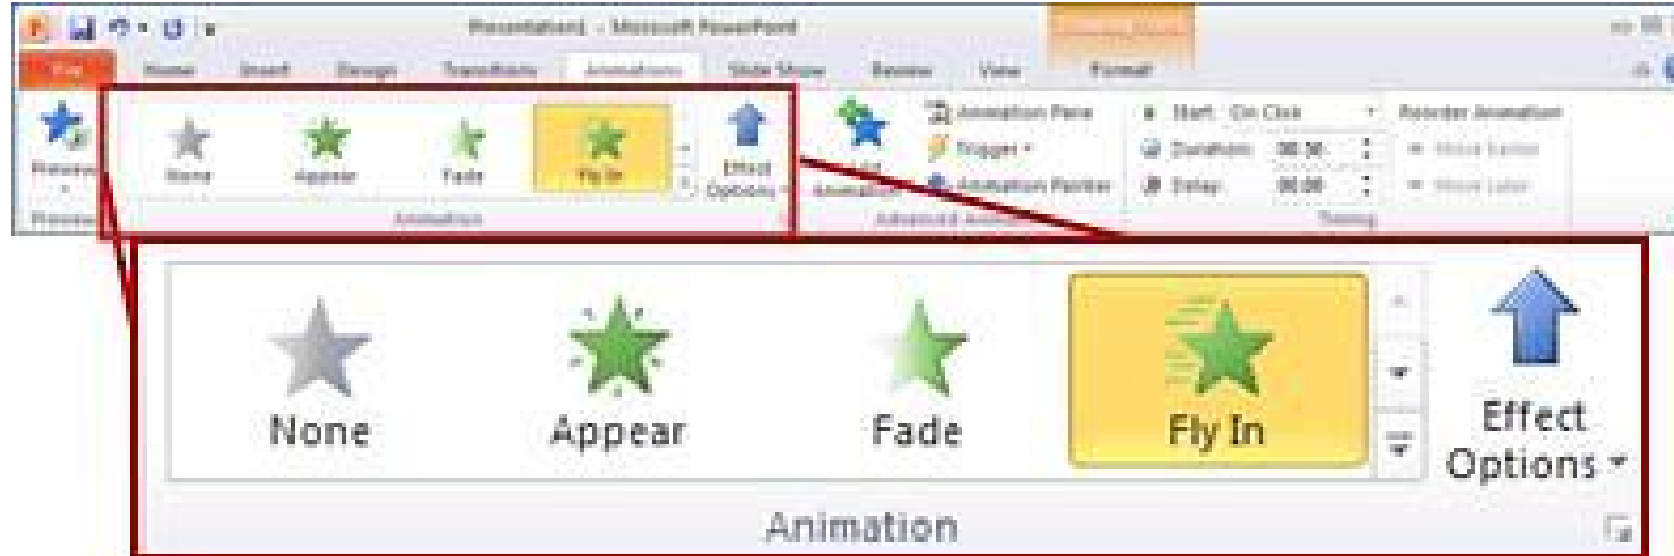

There are **four** different kinds of animation effects in PowerPoint 2007:

- **Entrance** effects. For example, you can make an object fade gradually into focus, fly onto the slide from an edge, or bounce into view.
- **Exit** effects. These effects include making an object fly off of the slide, disappear from view, or spiral off of the slide.
- **Emphasis** effects. Examples of these effects include making an object shrink or grow in size, change color, or spin on its center.
- **Motion Paths:** You can use these effects to make an object move up or down, left or right, or in a star or circular pattern (among other effects).

# Applying Animation to Objects

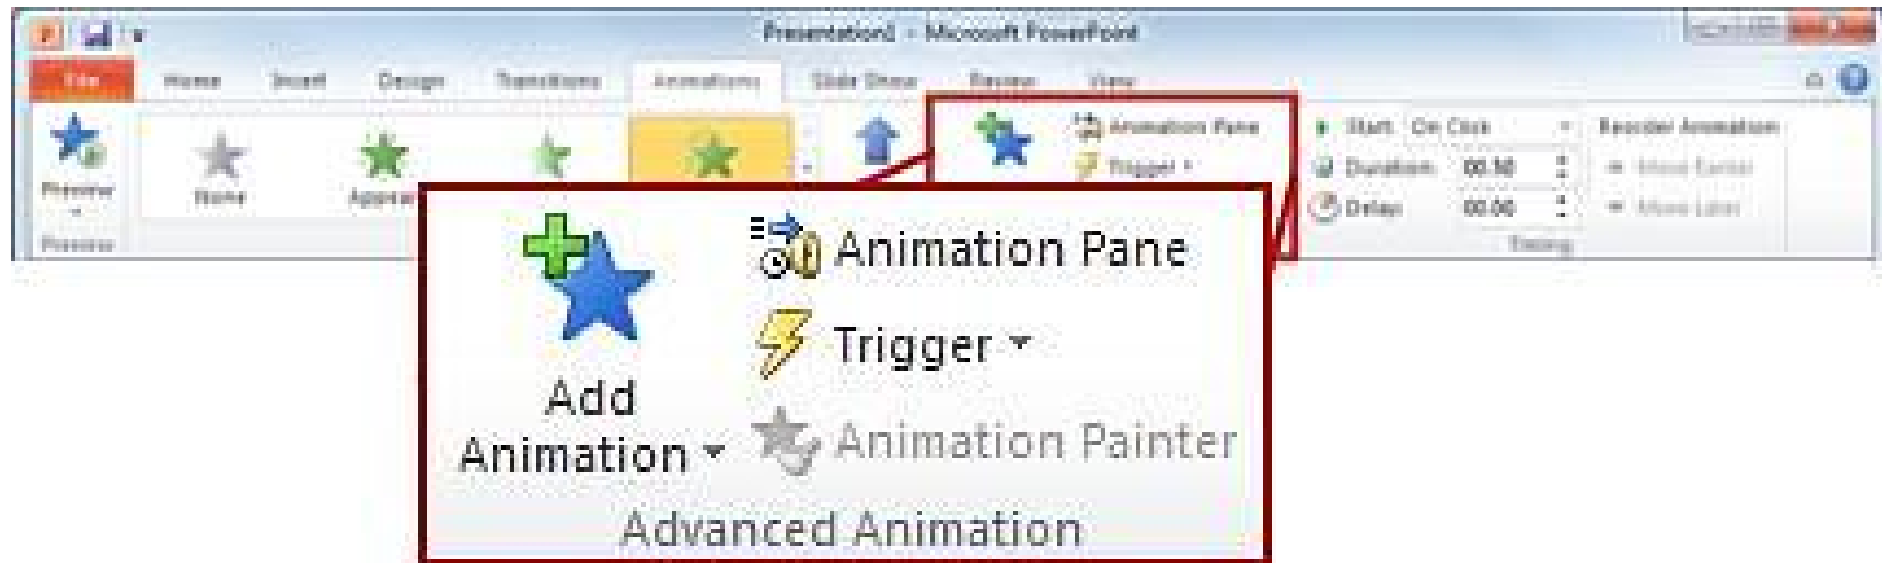

*To add an animation effect to an object, do the following:*

- *Select the object that you want to animate.*
- *On the **Animations** tab, in the **Animation** group, click the **More** button, and then select the animation effect that you want.*

# Applying Multiple Animations to Objects

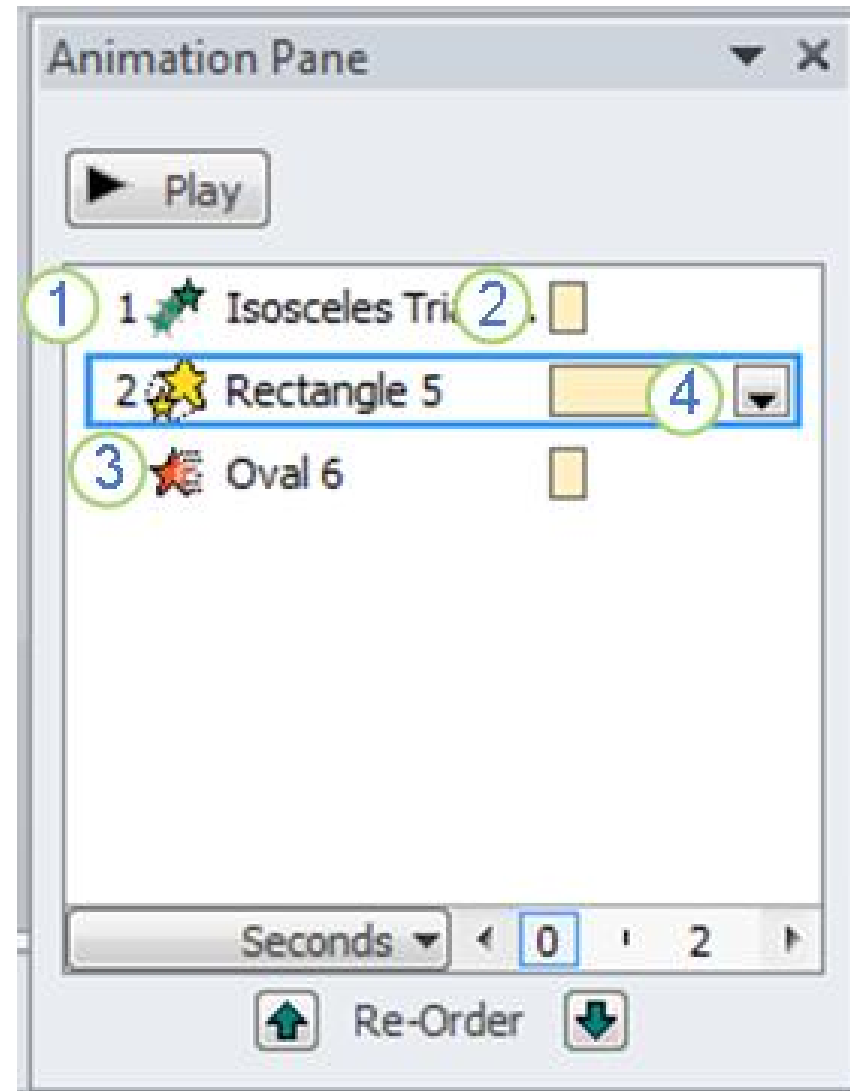

- Select the text or object that you want to add multiple animations.
- On the **Animations** tab, in the **Advanced Animation** group, click **Add Animation**

## View animations currently on the slide

*You can view the list of all the animations on the slide in the Animation task pane.*

- *To open the Animation task pane, on the **Animations** tab, in the **Advanced Animation** group, click **Animation Pane**.*

# Animation Effects and Timings

The setting allows one to add timing and effects to their texts and objects.

## Adding Effects to Slide Objects

- on the **Animations** tab, in the **Animation** group, click the arrow to the right of **Effect Options** and click the option that you want then;
- specify the start, duration, or delay timing for an animation on the **Animations** tab.
  - To set the **start timing** for an animation, in the **Timing** group, click the arrow to the right of the **Start** menu and select the timing that you want.
  - To set the **duration** of how long the animation will run, in the **Timing** group, enter the number of seconds that you want in the **Duration** box.
  - To set a **delay** before the animation begins, in the **Timing** group, enter the number of seconds that you want in the **Delay** box.
- To **reorder** an animation in the list; click on **Reorder Animation** and either select **Move Earlier** or **Move**.

# Previewing Animations

On the **Animations** tab, in the **Preview** group, click **Preview**.
